WEATHER OF CONCERN

Weather of Concern

Northern California:

- Above normal heat is expected to linger across much of interior Northern California for the upcoming work week.
- There are concerns about the Klamathon wildfire this afternoon and evening. An uptick in north to northwest winds (10-20 sustained/gusts to 30 mph) are forecast, due to the trough/dry frontal passage. And, while relative humidity values will be up a little from yesterday, it won't be much, so this could result in even more significant/active burning conditions compared to the last couple of days. A Red Flag Warning will not be issued, since criteria will not be met.
- Critical relative humidity values will be observed today along with these gusty winds and this will lead to more fire weather concerns this afternoon for portions of Modoc County.
- Later in the week, afternoon and evening showers and thunderstorms are forecast at higher elevations; however, there is still some uncertainty on how widespread the storms will be.

Southern California:

- Thunderstorm activity will continue this week, mainly during the afternoons and mostly confined to the mountains and deserts. However, all areas may see thunderstorms particularly Monday night through Tuesday. Flash flooding potential will exist with stronger, more stationary storms. Potential impacts include localized flooding, lightning, small hail and gusty winds.

WEATHER SYNOPSIS BY REGION

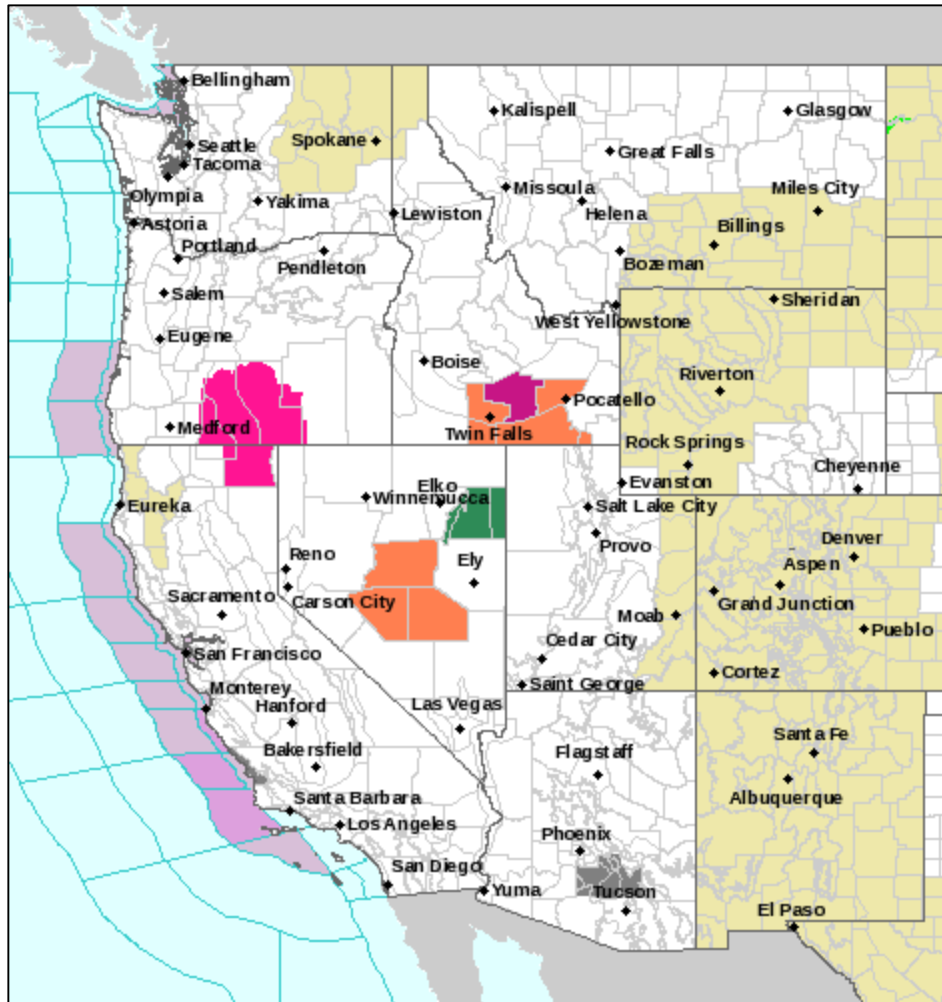

NORTHERN CALIFORNIA

Above normal heat is expected to linger across much of interior Northern California for the upcoming work week, under the influence of high pressure centered over the Great Basin region. Delta-influenced areas, farther south, may experience minor cooling through Friday. Monsoonal moisture makes a push north late week into the weekend. Afternoon and evening showers and thunderstorms are forecast at higher elevations; however, there is still some uncertainty on how widespread the storms will be.

SOUTHERN CALIFORNIA

Temperatures will slowly decrease the next few days. Monsoonal moisture will bring a chance of showers and thunderstorms each day, mainly over the mountains and deserts. There will be a greater chance of more significant rainfall across more areas on Tuesday and Wednesday as moisture increases with passing easterly waves. Some drying and warming is possible late in the week.
